# NEMESIS **5100**G2

**AUTOMATIC HARDNESS TESTER** 

UNIVERSAL | ROCKWELL, VICKERS, KNOOP & BRINELL

# NEMESIS **5100**G2

## Cutting edge technology, and beyond...

The second generation of the NEMESIS 5100, the G2, Rockwell / Vickers / Knoop and Brinell hardness tester provides exceptional performance, designed to match the most demanding user tasks. The NEMESIS 5100G2 contains a revolutionary force application range and renewed optical system.

The all new 9 position tool changer (turret) accommodates a wide range of indenters, indenter actuators with load cells, objectives, a cross-laser positioning system and a load cell supported touch probe. It also provides a base to the 18 megapixel full color measurement camera and 18 megapixel full color overview camera with variable field of view, motorized zoom and auto focus system.

# **HIGHLIGHTS**

- Multi load cell, closed loop system, custom test force configuration
- 2 Force range from 10gf up to 3000kgf
- Force upgrade available also years after first installation
- 4 9 position tool changer (turret) with visual LED process indicators
- Free to configure 8 objectives, 8 indenters, cross laser, touch probe, optional tools
- 6 Hardness tester & Metallurgy microscope with optional Metalloscope™ software
- 18 megapixel full color measurement camera, bright white LED TTL illumination
- 8 18 megapixel full color sample image & stage overview camera, anti-glare filter, motorized zoom for variable field of view and autofocus at any field of view
- Adjustable & rotatable dual LED workspace illumination
- iSMART™ docking station for CNC X-Y motorized or manual stage solutions
- 11 7 options for CNC X-Y high precision motorized iSMART™ stages (400kgf up to 4000kgf load)
- 12 Automatic workpiece height detection
- 13 Unique collision detection and test head retraction system
- 14 Integrated or External high performance, MS Windows based i7 system controller
- 15 IMPRESSIONS 4™ workflow and tester control system with 1 x 27" or 2 x 24" (touch)screens
- 16 Artificial Intelligence (AI) for enhanced Brinell readings
- Top quality ABS replaceable body parts, no frame damage from falling objects

#### CONVERSIONS

DIN EN ISO 18265, DIN EN ISO 50150, ASTM E140

# 9-POSITION TOOL CHANGER

## **Full configuration freedom...**

Newly developed 9 position state-of-the-art tool changer. From "turret" to tool changer because the 5100G2 turret offers more than purely holding lenses and indenters. The high-speed rotating mechanism is prepared for future modular plug & play tooling development. The tool changer is fully configurable.

Either 8 indenters or 8 objectives, or any combination, a laser positioning system and touch probe are installed as standard. The standard (removable) skirt protects tooling from damage.

#### **LOW FORCE INDENTER POSITION**

The low force indenter position is a complex assembly containing multi load cells providing a force range for Vickers, Knoop and Brinell from 10gf up to 187.5kgf. Multiple assemblies can be installed on the tool changer.

#### **CROSS LASER & TOUCH PROBE**

The cross laser & touch probe can be simultaneously used in the 9th position without loss of tooling positions. Multi touch probes available, with or without cross laser.

#### **MEDIUM FORCE INDENTER SEATS**

This indenter seat allows hardness testing ranging from option A: 200gf up to 45kgf for Vickers, Knoop, Brinell or option B: 1kgf up to 250kgf for Vickers, Knoop Brinell and Rockwell. Multiple indenter seats can be installed on the tool changer.

#### **HIGH FORCE INDENTER SEAT**

This indenter seat allows hardness testing ranging from 5kgf up to 3000kgf for Vickers, Knoop and Brinell. Multiple indenter seats can be installed on the tool changer.

#### **STAGE ILLUMINATION**

Adjustable power LED banks provide excellent diffused stage illumination.

#### **PROTECTION SKIRT**

The skirt mounted on the rotating centre of the tool changer protects each individually installed tool against accidental damage.

The collision detection system prevents tooling damage by early detecting obstructions in the test-path. The tool changer is continuously monitored during all movement processes and instantaneously stops and retractes if an obstruction is detected.

# **SMART**<sup>™</sup>

# **DOCKING STATION**

The NEMESIS 5100G2 has a iSMART™ docking station for the quick mounting of workpiece platforms. The docking station allows a wide variety of test tables, anvils, manual XY stages and the new wireless iSMART™ motorized CNC X-Y stages to dock within seconds. In this way, the user can create the most ideal circumstances for his particular workpiece.

The docking station is a new INNOVATEST standard. It can be found on an increasing number of hardness testers. This means that you can change your fixtures, stages, anvils and even the wireless iSMART™ motorized CNC X-Y stage between the various machines in your possession. No need to duplicate expensive tooling for different machines.

The iSMART™ docking station provides communication identification and power supply to various mounted accessories.

iSMART™ technology offers unlimited configuration freedom and safety for your tester. Creating a hardness testing sytem that can be configured to any requirements with standard or bespoke options, fitting a wide range of stage accessories and fixtures.

Automatic Stage recognition provides overload protection and damage to accessories.

#### **iSMART™ MANUAL | DIGITAL X-Y STAGES** A variety of manual and digital stages are available from the accessories list.

\*Can be used on a variety of manual stages, see page 31 (Stage/anvils)

# **ISMART**

# **MOTORIZED CNC X-Y STAGES**

The new wireless (or wired) iSMART™ motorized CNC X-Y stages provide excellent specifications combined with maximum flexibility. This new technology allows you to purchase a standard machine to start with, add stages, change dimensions of motorized CNC stages according to new requirements later in the life of the tester and upgrade in just seconds!

iSMART<sup>™</sup> technology reduces possible down time on stage maintenance to seconds in case of calamities. While most automatic machines will be "out of service" if the stage is defective, a wireless iSMART<sup>™</sup> stage can just be exchanged in seconds. No downtime!

There is a choice of 7 different type of iSMART™ stages (see table below) and if you need larger dimensions or different specifications for Custom Products, we can manufacture any possible stage to your requirements.

iSMART™ stages have onboard controllers and the EIS (electronic identification system) communicates with your hardness tester to create safety and assure no stage overload can take place.

The stages have pre-determined hole patterns on their surfaces. These patterns are in line with all INNOVATEST hardness testing stage accessories such as 1, 4, 6 or 12 position sample holders, vices and others.

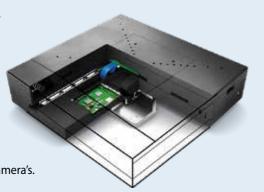

#### **AVAILABLE DIMENSIONS**

Туре	MA-XY7575S	MA-XY1212S	MA-XY2212S	MA-XY3412S	MA-XY2015S	MA-XY3015S	MA-XY4015S

Surface mm	215x160	260x205	360x205	490x224	410x265	510x265	560x265
Max load kg	400	400	400	400	4000	4000	4000

Consult with our sales department for other dimensions with short lead times.

#### **TECHNOLOGY HIGHLIGHTS**

- High speed positioning by motors and drivers for medical applications.
- Ball bearing spindles with overload protection clutches.
- Integrated ultra precise position reading electronics.
- Position accuracy 0.001mm, repeatability 0.0015mm.
- 7 different dimensions and travel options, see table above.
- Maximum load 400kg or 4000kg.
- Quick Change iSMART™ adapter, mount stage in seconds
- Wireless or wired connectivity.
- Replaceable, upgradeable, interchangeable.
- Matt black finish for maximum contrast with objective and overview camera's.

# purpose of software is to trol complexity...

re that optimizes user comfort with a wide range of standard functionality such measurement, auto-focus, reporting, test program storage, and many more.

ndard applications would not be sufficient, IMPRESSIONS™ nat can be installed as plugins, later, at any moment. During u need at that moment. Widen your options at any moment to install optional functionality. As easy or simpler than

# **IMPRESSIONS v4**

Next gen workflow & tester control...

Just buy a software release ticket, and your tester has added functionality, regardless where it is located. A revolutionary system taking care of all your needs.

In this way we keep the learning curve, the process to work efficiently with our software limited to the level of "need to have" and "need to know". The proportion of installed and activated software never needs to be more than your requirements.

On the higher end, IMPRESSIONS 4 connects flawlessly with quality control systems such as QDAS, exports files in CVS, XML or other formats and if your requirement is not standard, our team of engineers will efficiently find ways to handle your data properly. Bespoke solutions such as connectivity to robotic systems are standard solutions for INNOVATEST™.

Unique to IMPRESSIONS<sup>M</sup> 4 is a choice for screen size and position. Whether you wish your interface to be in portrait mode or landscape, all functionality is supported in both positions. For table top solutions like testers in laboratories, users often opt for landscape screen(s).

On the shopfloor the large landscape screens are often an unwanted component either requiring a table top or machine mounted bracket taking a lot of space and cables to deal with. IMPRESSIONS 4 leaves you the option to go for landscape or for portrait mode on a large selection of our machines.

For the NEMESIS 5100G2, INNOVATEST recommends the 27" industrial quality landscape screen operated by both touch as well as mouse and keyboard. One screen is standard included with the hardness tester, optional is the Dual view function, these are 2 x 24" industrial quality landscape screens. New applications are added to IMPRESSIONS™ on a regular basis; while INNOVATEST provides 10 years free updates, upgrades to more functionality or new additions can be purchased at any time.

# TIME REDUCING SOFTWARE SOLUTIONS...

#### 1

#### **PATTERN EDITOR**

The IMPRESSIONS™ pattern editor allows the user to create any number of test patterns with a large number of variable settings. Create test patterns with great precision and freedom. Verify the settings in the preview mode. Drag & drop patterns from one test sample to another sample. Live vision technique over zoom overview camera, no image stitching required.

Combine different patterns and even different test forces in one program, and run them fully automatically. All test points can be identified individually or to customer specifications. The label is shown in the test result list and in the test results overview and in the results print out. An important function for sample analyses at the end of a test and in the future for review of previous tests.

#### 2

#### CHD, SHD, NHD

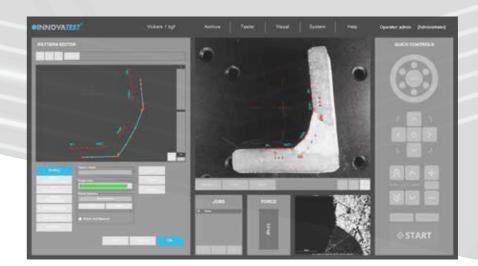

How do you increase throughput in your lab? Make the most common testing design as easy to set up as possible to perform automatically and still adhere to the applicable standards. CHD/SHD/NHD testing can be started directly from the surface view or from the overview. Additional core points of hardness can be defined separately for NHD measurements.

The distances of test points are automatically set to a minimum distance, following the standard, to assure correct testing is conducted. Time saving test mode "complete all indentations – then evaluate" and "auto-stop" to complete test series as soon as the lower hardness limit has been reached. Report Generator is enhanced with reporting features for this application.

#### **3** WELD INSPECTION (ISO 9015)

This especially developed tool enables you to conduct hardness testing on welded parts or segments according to ISO standard. Setting up the pattern according to the requirements becomes "easy-to-do", due to pre-set test points in the different zones of the weld and automatic correlation between test points. The system will run a fully automatic test procedure and display and record the results accordingly. The Report Generator is enhanced with reporting features for this application.

#### 4 HARDNESS OF SCREW THREAD DECARBONIZED ZONE (ISO898-1)

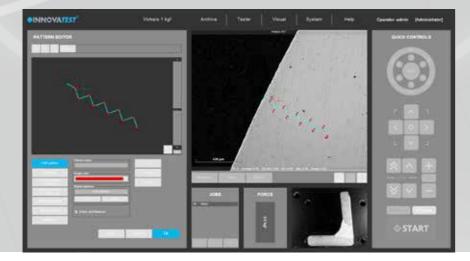

A specialized software tool of IMPRESSIONS™ allows you to set up and conduct fully automatic testing as per ISO898-1 for screw thread measurement of (de)-carbonized part.

The Report Generator is enhanced with reporting features for this application.

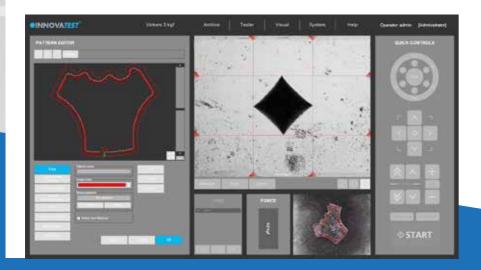

#### 5 EDGE DETECTION

Technology that automatically or at a mouse click recognizes the edge of your sample. This helps to determine and fix the desired starting position for CHD or other pattern testing jobs.

#### 6 AUTOMATIC CONTOUR SCANNING

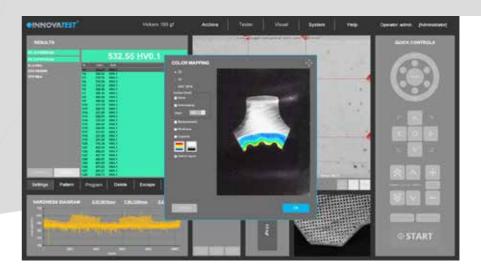

This application scans the entire outline (or partial) area of a sample. The function can be used with an objective by using the overview zoom camera for high speed scanning. The system scans the entire outline defined and stores all relevant data in the test program.

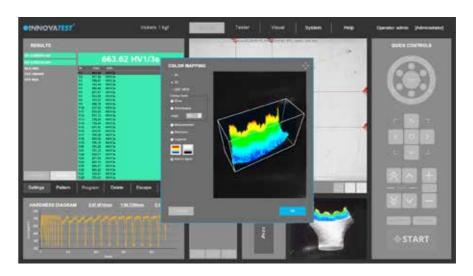

Subsequently, a limitless number of test points can be inserted into the scanned image, or be set at selected distances (offset), relative to the edge. This advanced feature enables the hardness testing procedure to be performed c. An excellent featured combined with 2D or 3D hardness mapping, also known as "plane hardness chart".

#### **7** 2D HARDNESS CHART

The application "Plane hardness chart", is also referred to as Color Mapping happens to be the perfect tool for securing the detail of the effective hardness distribution over the total sample cross section of heat treated samples. An important feature in material exploration, weld testing or in damage analysis.

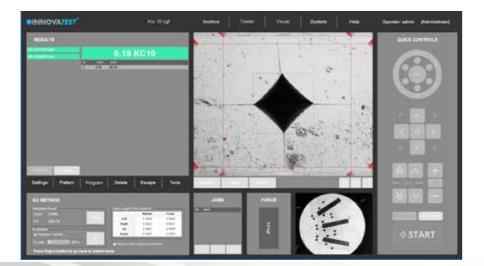

#### **8 3D HARDNESS CHART**

In addition to 2D graphic diagrams, the system can also automatically generate 3D diagrams. 2D and 3D hardness charts are included in one application.

#### **9** Kic CRACK MEASUREMENT

For those requiring more in depth knowledge on materials behavior, wishing to study material fracture and fatigue, crack growth can be predicted and measured by using the Kic application.

The software supports Kic crack detection under load with customized Kic result reporting. By way of one or both methods, Palmqvist or Median / Radial, fracture toughness is now a repeatable and reproducible test across multiple operators.

#### **10** SNAPSHOT FUNCTION

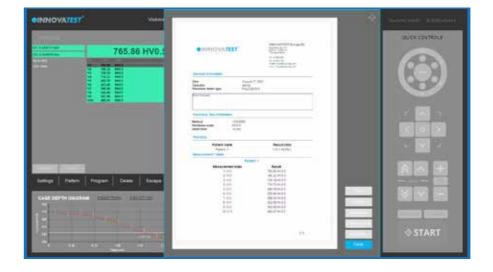

This handy function in IMPRESSIONS™ allows you to make screen captures of the viewing area by way of objective view and/or Overview camera. It gives the opportunity to store such images with comments or to paste them into the report generator for further processing.

#### **11** USER DEFINED PROGRAMS

For repeating jobs, IMPRESSIONS™ utilizes the option of setting up and storing custom test programs. For each task, a "job" can be created. All application specific parameters, such as hardness scale, force, dwell-time, pattern, conversion and the report template are stored in the same program.

#### 12 REPORT GENERATOR

Imagine having a report created for you that includes: Your company name, address, contact information, labeled results related to patterns or sequential, pictures of your optical measurements, stitched images, notes section for each result or pictures, rendition of the pattern performed, overview picture of your pattern on your sample, full statistics, summary of your results, go nogo results, Pass or fail...

All this information or having the ability to only have what you need reported, we call this our Report Configurator. You decide how much or how little you report by PDF or laser printer. We even keep it simple by choosing export to CSV file, to a thumb drive or network file location. Data management at its best!

## **VIBRATION | TEMPERATURE | HUMIDITY**

# MONITORING

Our world is going through processes that have influence on climate and environment. More often we see extreme heat, extreme cold and periods of extreme rain. To assure that such disturbances of nature do not coincidentally effect your measuring or testing results, we have prepared our machines to climate change and forces of nature.

#### **13** VIBRATION & EARTH QUAKE MONITORING

The integrated high precision accelerometer electronics continuously monitor your tester's stability environment. While the tester has vibration isolators (machine dampers) installation environment is often not ideal. Think of heavy traffic, loaded fork lift trucks, excentre presses or other equipment making shop floor installation a base of trouble.

For certain countries/area's in the world where light earthquakes are so common that they are hardly noticed, the vibration monitoring system will give a warning message and stop the hardness testing process to avoid incorrect readings.

#### 14 TEMPERATURE & HUMIDITY MONITORING

Extreme high or low temperatures might not only effect the hardness readings of your machine (think of installation in extremely warm countries or nearby furnaces) extreme humidity might even damage the sensitive electronics.

## **BARCODE & QR SOLUTIONS**

# **IDENTIFICATION**

The basic function of the barcode reader is to load data in to determined user fields.

The BAR | QR code module of INNOVATEST connects the machine to a database or network environment loading samples and data.

In the above application, a turbo part has been engraved with a QR code. Extra challenging was the fact that the QR code was engraved in a high polished part of the turbo shaft.

All data for the particular turbo part was fixed in the underlaying QR code. The scanner loads all customer data in the hardness testing machine and assures that the testing outcome is included in the particular test report database, fully automatic.

# METALLOSCOPETM METALLOGRAPHY SOFTWARE

The objectives on the 5100G2 make the hardness tester into an excellent highly automated metallographic microscope. Metallographic studies are of key importance in the manufacturing process of metals and steel, in the aerospace and automotive industry, in mechanical engineering, construction and in the manufacturing of a vast number of industrial and consumer products.

Microscopy is an indispensable feature of every metallographic lab, whether you investigate damages, develop novel alloy materials or perform quality control to ensure the purity of steel. The measurement of certain parameters such as volume fraction, coating thickness and grain size is specified in strict standards and norms.

Metallography is used to investigate metals from copper and titanium to iron, steel and alloys of every description. These investigations can now be performed quantitatively and reliably using the INNOVATEST Metalloscope<sup>m</sup> 1 software module, running on most of our higher-end hardness testing machines\*. \*(features of Metalloscope<sup>m</sup> 1 software depend on the particular tester model).

The microstructure of metals has a significant influence on properties such as strength and corrosion resistance. Therefore, a detailed investigation of the microstructure with the help of microscopy is central to metallographical disciplines as well as many industrial applications.

#### **GRAIN SIZE**

#### Grain size;

The grain size index can be calculated in various 1 or 2 dimensional way; using a 1-dimensional method (from the number of grain intercepts per mm) or a 2-dimensional method (from the number of grains per mm2). Line profile: 1-dimensional grain size index calculation by counting the number of grain intercepts on a line. Hexagonal grid: 2-dimensional grain size index calculation using a superimposed hexagonal grid or single grains calculation by counting the number of grains in a specific part of the image (blue box).

# Hardness tester and metallurgical microscope.

Basic metals undergo specific treatment in order to prepare them for particular applications and to improve their characteristics, for example by adding alloying elements. In many cases, the microscopy investigation focusses on the correlation between the resulting microstructure and the material properties.

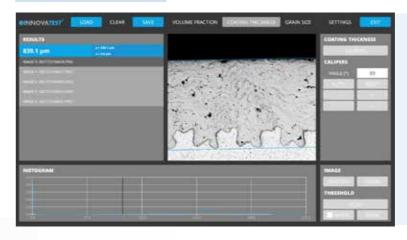

#### **VOLUME FRACTION**

#### Volume fraction

Various methods integrated; the example shows a sample consisting of ferrite (black material) and austenite (white material). Pixel counter: calculation based on histogram-guided image thresholding. Two automatic thresholding algorithms in addition to manual thresholding. Grid counter calculation using a superimposed grid. Each grid point can be assigned to the black material or white material. Initial values (black or white) are assigned automatically, but can be toggled manually. Grid positions are calculated by defining the number of grid points or the grid spacing.

#### **COATING THICKNESS**

#### Coating thickness

Calculate the thickness of a coating layer. This can be a single thickness or a mean thickness with standard deviation or a coating contour. Calculation using two parallel lines. The resulting coating thickness is the distance between these lines. Calipers can be rotated, automatic or manual. Coating contour: coating thickness calculation based on a number of measurement points. Contour edges are drawn semi-automatically and the number of measurement points can be selected by the user.

The NEMESIS 5100G2 is basically an upright, brightfield and darkfield microscope.

Contrast methods of reflected light brightfield result are best suited to analyze the microstructures of etched surfaces. Recognizing grain boundaries, you can draw conclusions on grain sizes, phases and structural constituents. Impurities and structural constituents, such as graphite in cast iron, prior to etching are getting visible.

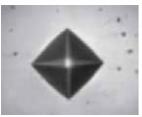

Reflected light darkfield shows up mechanical surface faults such as fracture sites, pores and inclusions as well as cracks, scratches and cavities. In combination with the NEMESIS 5100G2 automation, the system provides in maximum efficiency for both hardness testing and materials inspection.

# AUTOMATIC IMAGE EVALUATION

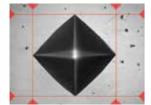

#### **AUTO FOCUS**

Fast & precise, observe how IMPRESSIONS<sup>™</sup> finds focus from a large distance, as far as the travel of the Z-axis allows. Algorithms used for close distance autofocusing set new standards in AF speed.

#### **AUTOMATIC MEASUREMENT**

Manual positioning of filar lines is no longer required. IMPRESSIONS<sup>™</sup> refined measurement algorithms detect indents even on very poor or scratched surfaces and measure the relevant indent dimensions according to standards. Stay in control by switching to manual measure mode and have the option of adjusting measurements by touching the screen or using the mouse. Filar lines can be colored to give the best contrast against the specimen's surface. To assure that measurements meet relevant standards on symmetry, enable the automatic indent check. All hardness values can be converted to other scales according to ISO 18265, ISO 50150, ASTM E140.

#### **ILLUMINATION SETTINGS**

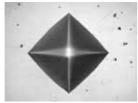

IMPRESSIONS $^{TM}$  software automatic illumination system adapts to the correct illumination regardless of the sample surface quality, wherever on the sample, independent from material (steel, carbide, coated or ceramic). Contrast, Brightness and program, can be set automatically for each measurement or controlled manually. Sharpness can be stored with the pre-determined test.

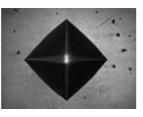

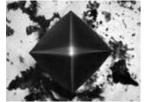

OK

Too dark

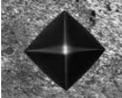

Complex, refined algorithms ensure reproducible measurements on different materials and even on scratched and damaged surfaces.

Irregular surface

Regular surface

Poor surface

#### **SUPERIOR ARTIFICAL INTELLIGENCE (AI)**

We include an advanced physics development breakthrough in the image analyses of our Brinell capable hardness testing machines.

The conventional image processing methods on hardness testing machines are fairly successful for clean images that present clear indentation boundaries. In practice, however, workpieces or samples often have rough surfaces that compromise the quality of the image processing which could potentially result in incorrect hardness values.

A human observer can easily find the indentation in both images and the exact boundaries of such indentation (see fig. 1). For a computer algorithm, finding the indentation in the right image is much more challenging due to the many gradients in this image (see fig. 2). Artificial intelligence can overcome this difficulty by training a complex computer neural network to "think" as a human observer.

The INNOVATEST Brinell AI model is trained in our research facility/R&D department using powerful supercomputers. The training phase optimizes millions and millions of weight factors in a neural network, to learn how an indent can look like, using a gradient descent approach. Weight factors have been optimized by a human observer and after optimum weigh factors where determined. Using the AI function on our hardness tester to detect new indentations is called "inference" and requires significantly less computing power. The AI model has been created.

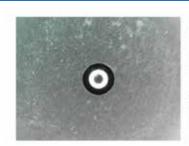

The integrated Intel® Core™ i7 processor can easily handle this task which makes it possible to install and use the INNOVATEST Brinell Al module on the NEMESIS 5100G2 as well.

During inference, a new image (a new Brinell indent image) is entered in to the neural network with weights that where determined during training (see fig. 3).

The complex algorithm is capable to calculate a "mask" on its own, this mask is plotted on top of the indent image, exactly filling the indent and marking the edges that then can be easily detected by automatic image recognition system (see fig. 4).

This super advanced technology requires no special objectives and provides even indents with poor visibility, often the case with shallow indents in rough surface materials, to be perfectly detected and measured.

The system is far superior to special objectives and standard Brinell measuring systems.

NEMESIS 5100G2 B         200gf - 750kgf           NEMESIS 5100G2 C         200gf - 3000kgf           Optional force ranges         OPTION 1         10gf - 200gf           OPTION 2         250kg - 250kgf           Test force tolerance         < 0.25% for test force 100gf to 3000kgf           < 0.5% for test force below 100gf	Test forces	10gf - 3000kgf	
NEMESIS 5100G2 C   200gf - 3000kgf	Force range per model	NEMESIS 5100G2 A	200gf - 250kgf
Optional force ranges         OPTION 1         10gf - 200gf           OPTION 2         250kg - 250kgf           Test force tolerance         < 0.25% for test force 100gf to 3000kgf		NEMESIS 5100G2 B	200gf - 750kgf
OPTION 2 250kg - 250kgf  Test force tolerance < 0.25% for test force 100gf to 3000kgf  < 0.5% for test force below 100gf		NEMESIS 5100G2 C	200gf - 3000kgf
Test force tolerance < 0.25% for test force 100gf to 3000kgf < 0.5% for test force below 100gf	Optional force ranges	OPTION 1	10gf - 200gf
< 0.5% for test force below 100gf		OPTION 2	250kg - 250kgf
	Test force tolerance	< 0.25% for test force	e 100gf to 3000kgf
<b>Dwell time settings</b> Default 10 seconds, user defined. Up to 999 seconds		< 0.5% for test force	below 100gf
	Dwell time settings	Default 10 seconds,	user defined. Up to 999 seconds

#### **MOTORIZED TOOL CHANGER**

Motorized tool changer (turret)	Ultra-fast, 9 position, 8 free to configure, 1 fixed
Free tool positions	8 for indenters, 8 for objectives (8 max total)
Fixed tool positions	1 for cross laser & touch probe
Objectives	Long working distance 0.7x, 2.5x, 5x, 10x, 20x, 40x, 60x, 100x
Indenters	Certified indenters (ISO/ASTM) available at choice
Camera 1 (objective)	18 Mpx, HD, 4K+, Machine vision system
Camera 2 (overview)	18 Mpx Full HD, Full Color, Optical zoom system, variable FOV 40 x 30mm - 140 x 110mm

#### **SYSTEM**

Electronic system Standard (Recommended)	High performance embedded controller, i7 mSSD, 120 GB  MS Windows® 10 operated , up to 8 years* INNOVATEST warranty
Electronic system (Optional)	High performance external controller, i7 or i9 SSD, 1TB  MS Windows® 10 operated, 1 year factory warranty
Screen(s)	27" capacitive touchscreen, optional 27" or 2 x 24" (touch) screens (all landscape)
Display resolution	0.01 HV, HK, HB
Statistics	Total test, max, min, average, range, standard deviation, All in real time after each test
Hardness conversion	Rockwell, Rockwell Superficial, Vickers, Brinell, Knoop, Leeb & Tensile
Software	IMPRESSIONS™V4, work flow system & tester control
Data storage capacity	Internal and external mSSD, SSD or HDD
Data output	XML, CSV, Certified for Q-DAS (optional)
Data input	Keyboard, touchscreen, barcode scanner, database
Connectivity	5 USB ports, RJ45 Ethernet LAN, W-LAN, RS-232, Blue Tooth, 5 Axis CNC & motorized XY-stage connector, Dual HDMI screen connectors
Printer	A4, A3 full color laser printer (optional)

#### **GENERAL**

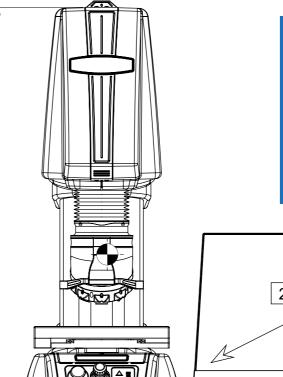

Machine dimension	1100mm x 425mm x 695mm
Machine weight	180 kg
Workpiece accommodation	150mm (H) x 230mm (D)
Power supply	100VAC to 240VAC, 50/60Hz, single phase
Operating temperature	10°C to 35°C
Power consumption	100W
Humidity	10% to 90%, non-condensing
Noise	< 70 db(A)

# TECHNICAL DRAWINGS

All dimensions in these drawings are in mm, approximate. Working heights and or workpiece accommodation varies depending on the stages and stage accessories used.

Please contact our sales department for more details.

#### OTHER MODELS IN THE

## **UNIVERSAL RANGE**

#### **NEXUS 605U**

Fully automatic, load cell, Closed loop, force feedback universal hardness tester with electronic micrometer or analogue eyepiece. I-TOUCH™, 6.5" full color touchscreen. See brochure B19N605U/XX

#### **NEXUS 7700**

Fully automatic, load cell, closed loop, force feedback universal hardness tester with full HD optical zoom stage overview camera, IMPRESSIONS™ 12" full color touchscreen. See brochure B19N7700/XX

#### **VERZUS 750U**

Fully automatic, load cell, Closed loop, force feedback universal hardness tester with electronic micrometer or analogue eyepiece. IMPRESSIONS™ 8.5" full color touchscreen. See brochure B19V750U/XX

#### FENIX 300U

Load Cell, Closed loop, force feedback. test force application system Universal hardness tester with I-TOUCH™ system. See brochure B20F300/XX

#### **NEMESIS 9100**

Multi Load Cell, Closed loop Fully automatic, 8 position turret Rockwell, Superficial Rockwell, Micro/Macro Vickers, Knoop & Brinell Hardness testers Descending test head, fixed work piece position See brochure B18N9100/XX

#### **NEXUS 8100**

Heavy duty fully automatic, load cell, closed loop, force feedback universal hardness tester with full HD optical zoom stage overview camera, IMPRESSIONS™ 15" full color touchscreen. See brochure B19N8100/XX

#### **NEXUS 8100XL**

Heavy duty fully automatic, load cell, closed loop, force feedback universal hardness tester with full HD optical zoom stage overview camera, IMPRESSIONS™ 15" full color touchscreen. See brochure B19N8100/XX

#### **NEMESIS 9600**

Heavy duty fully automatic, load cell, closed loop, force feedback universal hardness tester with full HD optical zoom stage overview camera, IMPRESSIONS™ 15" full color touchscreen. See brochure B19N9600/XX
